

TRUE/FALSE

True/false questions test your recognition of facts and concepts. Of whether the information stated is TRUE or FALSE.

Read Carefully

- Read the entire statement
- If the statement has more than one part, identify these parts
- Test each part for truth
- If any one part is false, the entire statement is false

Qualifiers

- These are the same words to watch for in Multiple Choice questions
- Words such as: *sometimes*, *rarely* or *almost*
- These qualifiers generally make a statement TRUE
- Strong qualifiers such as *always* or *never* generally indicate a FALSE statement

Watch for Negatives

- These are words like **not** and **cannot**
- Read the statement without these words and see if you can decide on TRUE or FALSE
- Add the negative, and the correct answer would then be the opposite
- And remember, two negatives make a positive!
